```
    for (int i = 0; i < n; i++) {
        if (capacity == 0)
            break;

        if (items[i].weight <= capacity) {
            totalProfit += items[i].profit;
            capacity -= items[i].weight;
        } else {
            totalProfit += items[i].ratio * capacity;
            capacity = 0;
        }
    }

    cout << "Maximum Profit: " << totalProfit;
    cout << "\nTime Complexity: O(n log n)";
    cout << "\nSpace Complexity: O(n)";

    return 0;
}
```

Output -

Output

```
Enter number of items: 3
Enter profit and weight of each item:
60 10
100 20
120 30
Enter knapsack capacity: 50
Maximum Profit: 240
Time Complexity: O(n log n)
Space Complexity: O(n)
```
